

Fibertex Geotextiles

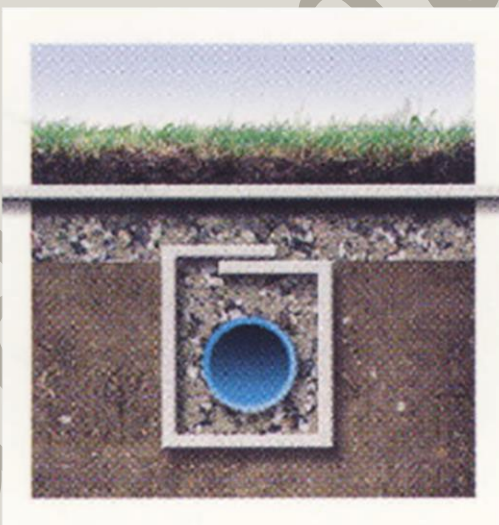

■ DRAINAGE/FILTRATION ■

Drainage Pipes

With permeable Fibertex Geotextiles wrapped around the pipes, an effective and long-lasting drainage system is ensured, without any risk of clogging.

Surface Drains

Surface Drains are likely to become silted up from the surrounding soil.

Fibertex Geotextiles keep the fines separated from the drainage layer ensuring the effectiveness of the drain system.

Drainage Trenches

Fibertex Geotextiles protect the drain system by preventing mingling of fines.

Building Drains

In the construction of foundations and basement walls, Fibertex Geotextiles ensure a clean and effective circumferential drain, which e.g. prevents damage caused by dampness.
