

Fibertex Geotextiles

■ HYDRAULIC WORKS ■

Coastal Protection

Fibertex Geotextiles protect the coast-line as their flexibility and permeability ensure withstanding of the impact of waves and currents, preventing erosion and washing out of fines.

Dams

Artificial dams and embankments need to be fortified with strong materials to resist the forces of nature. Fibertex Geotextiles stabilize and prevent washing out of fines.

Harbour Constructions

Fibertex Geotextiles placed behind the retaining wall keep the drainage layer clean which relieves the hydraulic pressure on the wall. When placed in front of the retaining wall, Fibertex Geotextiles prevent washing out of the seabed.

Artificial Lakes

The waterproof membrane is protected against perforation with Fibertex Geotextiles.
