ADCO Membrane 596 is manufactured from polypropylene staple fibres which are needle-punched. It is highly durable and resistant to alkalis and acids.

**Important**: The alkali resistance renders this product suitable as component in cementitious-based waterproofing systems such as ADCO Cemkote 521W.

ADCO Membrane 596 is manufactured from virgin polypropylene fibres.  
Standard Roll size: 1 m X 100 m.  
Application-specific sizes can be cut on request.  
ADCO Membranes are manufactured to quality assurance procedures.

**Notes**:  
ADCO Membrane 596 is a general waterproofing membrane ideally suited for all types of saturates namely cementicious-based, acrylic-based and bitumen-based.  
ADCO Membrane 596 has excellent conformability and elongation properties.

**UPDATE**  
May 2017.  
This supercedes all previous documentation.
